

LAYOUT INSTALLATION GUIDE URL:

http://divilayouts.divithemecenter.com/theme-builder-installation-guide/

Author: Divi Theme Center

Image source:

All images are licensed according to the terms of your purchased license.

Minimum requirements:

WordPress Version : 5.2.0

PHP Version : 7.2.x+

MySQL Version : 5.7.x+

https://wordpress.org/about/requirements/

Zip upload installation method :

make sure uploads up to 2MB are allowed for your hosting

Installation Step To Import " Blog Post or Detail Page Layout " Using Divi Theme Builder Option:

Documentation:

Start by downloading ' **Product Zip File** ' and ' **Supplementary File** '. Upon purchasing this layout pack, you will receive a ' **Product Zip File** ' containing **1** .json file and **2** .txt file with Information and License.

' Supplementary Zip ' will includes ' Installation Guide ' & ' XML Files ' if in-case you need import ' dummy data ' or else ' XML ' files is not needed

Installation Steps:

- 1. Make sure you have the latest " Divi " Theme installed and activated
- 2. Go to " Divi > Theme Builder ".

Click on the " **Portability Icon**", next to the delete and history button on top right corner.

Specific ' **Blog Version** ' you have imported will display as needed.

Important:

The **' Layout JSON '** does not include demo blog posts. Please use your own blog posts or you need apply **' Optional Step '** to load **' Dummy Posts '** else you can skip the step

Optional Step:

If you are importing ' **Blog Layout Version** ' on the fresh divi installation you might need import ' **Post / Media XML** ' that is if you need import / load ' **Dummy Blog Posts** ' on your website . In usual case ' **JSON** ' imported will fetch the ' **Blog Posts** ' that is loaded on your website and can skip this step.

For 'XML' files you need to import it under **Tools -> Import -> WordPress Import**. You can ' skip this step ' if your site already have ' Posts ' added or loaded in WordPress Admin under "All Posts".

CSS Code:

The code module with CSS code is used in the layout and included in the 'JSON'

Product Images :

For the best experience, I recommend using product images with transparent background in **PNG** format.

Website Content Width :

This layout was built using the **1080px** website content width. We recommend the same width for the best experience.
