

DIVI LAYOUT PACK INSTALLATION TUTORIAL:

<https://divilayouts.divithemecenter.com/all-in-one-divi-layout-pack-installation-guide/>

Requirements:

In order to successfully run ‘ **Our Divi Layouts** ’ on your website your server environment will have to meet certain PHP and WordPress minimal version requirements.

Essentials:

-PHP 5.4.X or higher

-In order to install our Child theme or Layouts, you must first Purchase **Elegant themes Membership** and Download **Divi theme**.

-This Divi Layouts is fully compatible with **Divi v4+**, just make sure that you’ve installed the latest version of Divi theme. Some features may not work correctly if the Divi theme version is less than **v4.3.2**.

Installation Documentation:

Files With The Product:

After you have Un-zip the file you will see :

1. → **Product Files** : This Folder Have A. ” **All_Styles_Library** ” JSON that will include all styles JSON in one file that you can import in ‘ **Divi Library** ’ B. “ **DiviThemeBuilder_Example** “ JSON that will be imported under **Divi -> Theme Builder** C. license.txt file
2. → ‘ **Supplementary Zip** ’ will include A. ‘ **Individual Styles Library Json**‘ Files B. Supporting document like [‘ **Installation Guide Files** ‘]

Installation Guide :

Step 1:

Import ‘ **All_Styles_Library_Json** ‘ Files For Layout Pack Using Divi Library Method

A. Make sure you have the latest “ **Divi Theme installed** “ and activated

B. Import product ‘ **Library Layout (.json) File** ‘ that is’ **All_Styles_Library_Json** ’under ‘ **Divi -> Divi Library -> Click Import & Export**

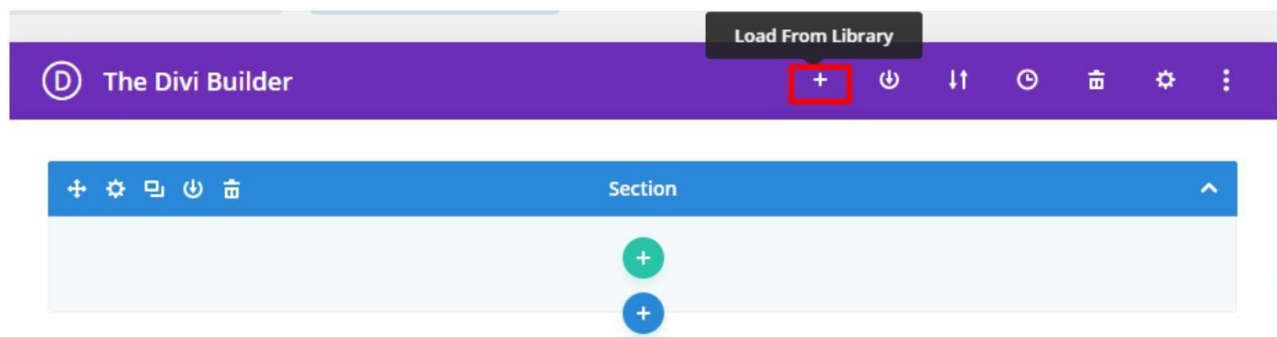

Use " All_Styles_Library_Json " if you want to import all styles in one shot under ' Divi Library '

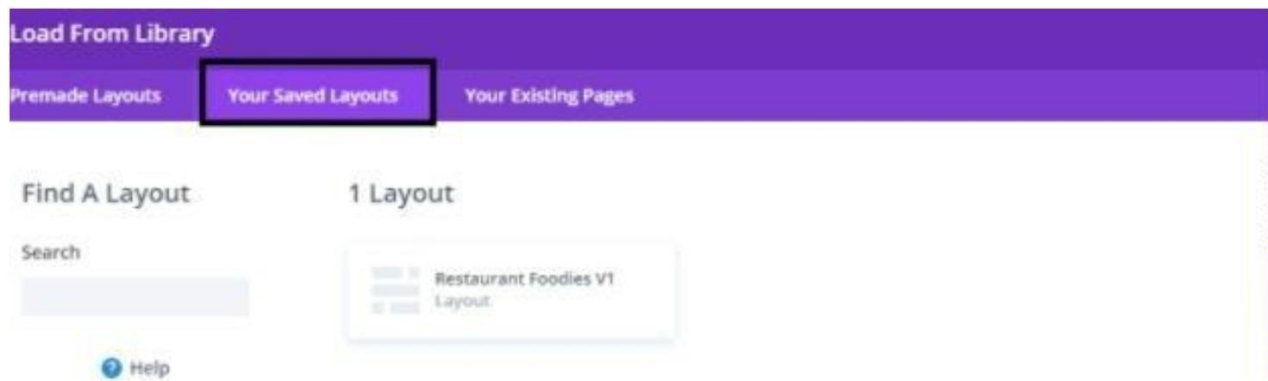

C. After importing JSON files ' Go To -> Divi Library ' and you will see layout you imported like below:

<input type="checkbox"/>	Title	Categories	Type	Global	Date
	Nothing found	Divi Layout - your layout name will appear here			
<input type="checkbox"/>	Title	Categories	Type	Global	Date

D. Go to Pages → Add New and give your page a title
→ Click on Use ' The Divi Builder '
→ Click on ' + ' Icon -> Go To " Your Saved Layouts "

Select one that you want to load on your page and import.

E. After selecting the layout ' **Publish Page** ' and see at the front end.

F. Wait until the layout is imported (it can take up to several minutes) Don't forget to publish/save your page.

G. All icons and images will be automatically imported with the .json file

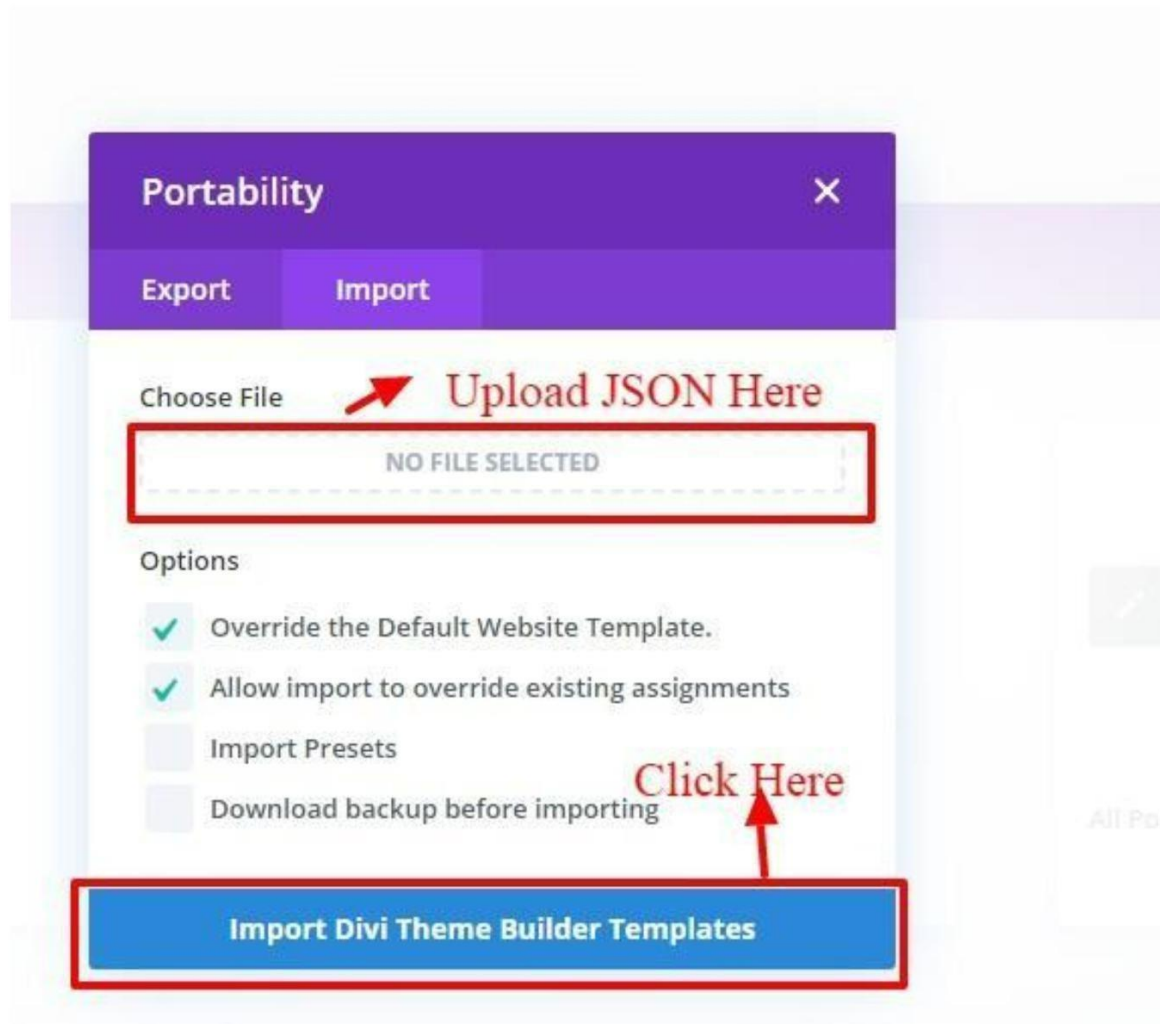

Step 2:

Import ' **ThemeBuilderLayout** ' JSON Available In The Product zip Files And Is Mandatory.

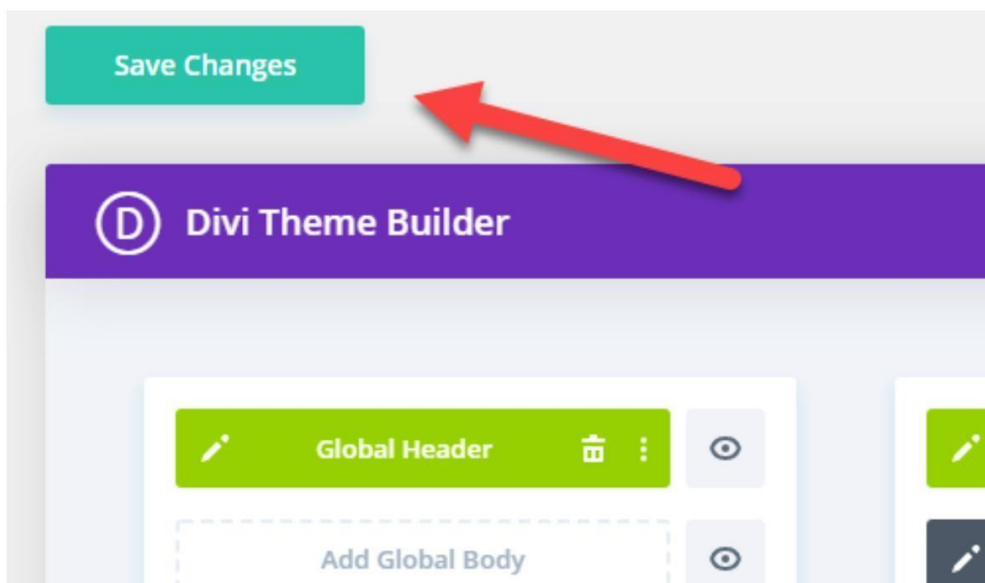

A. You need import ' **Theme Builder** ' json available in the supplementary zip and is mandatory. Now Hover over to **Divi > Theme Builder** and click on ' **Portability** ' Button at the top right corner.

B. Now click on the Import button and then Choose the ' **Theme Builder JSON** ' file from the Supplementary Package you've downloaded and Click on **Import Divi Theme Builder Templates** Button.

C. The Completion of the Importing Process, you can now click on the **Save Changes** button.

Step 3:

Creating Pages In Divi or Loading Required Pages From Divi Library That We Already Imported in The Previous Step

- A. Go to Pages → Add New and give your page a title
- Click on Use ' The Divi Builder '
- Click on ' + ' Icon -> Go To " Your Saved Layouts "

Select one that you want to load on your page and import.

For example if you want to load ' **Home V1** ' select that from the ' **Saved Layouts** ' under Divi Library

B. After selecting the layout ' **Publish Page** ' and see at the front end.

C. Wait until the layout is imported (it can take up to several minutes) Don't forget to publish/save your page.

D. Likewise you need to repeat same procedure and load all the ' Layouts ' that you need from ' **Saved Layouts** ' under Divi Library

Step 4:

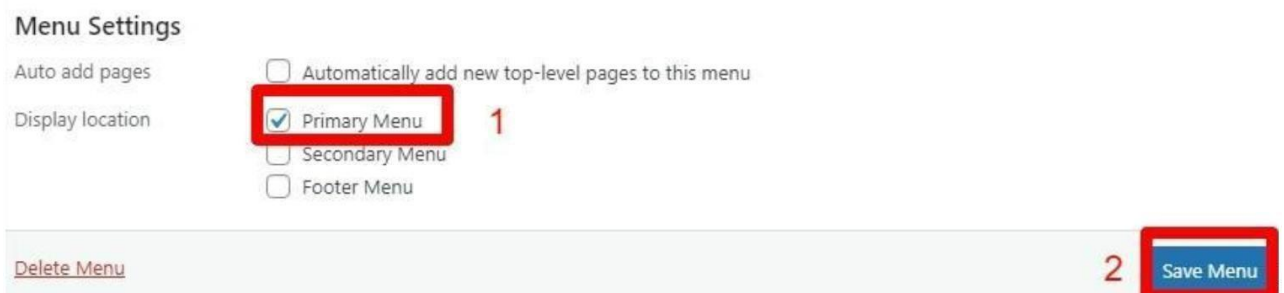

Creating Menu and Set HomePage

A. Go to Appearance → Menu → Under Menu Structure ' **Menu Name** '

B. Give name as ' Main Menu ' which is the name used for the menu in most of our layout packs or you need verify name for ' Menu ' under Divi → Theme Builder Setting → Global Header Setting

C. At Bottom of the ' **Menu Structure** ' page under Menu Setting → Set Menu as → Primary Menu → Save Menu

D. Under ' **Add Menu Items** ' you will see list of all the pages that you have created in previous step ie Step 5

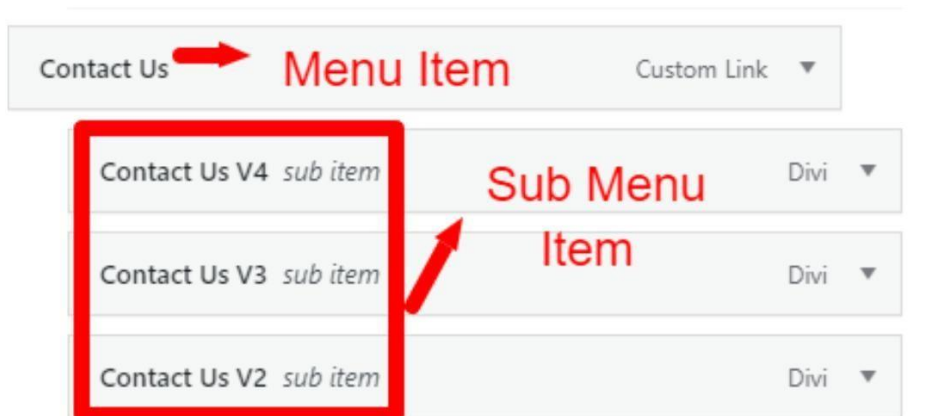

For Adding required pages in the ' **Menu** ' Go To Add Menu Items → Right Click All The Pages Needed - > Save By Clicking Add Menu Button

Like in above example have added ' **3 Contact Us Version** ' in the Menu

E. You can do the required setting as needed.

That is you can add pages that you need set as ' **Menu Item** ' and one as ' **Sub Menu Item** ' Like in example shown below have added ' Contact Us ' as menu item and ' Contact Us V2 to V4 ' as sub-menu item

Likewise can do required settings as needed.

F. Save the changes.

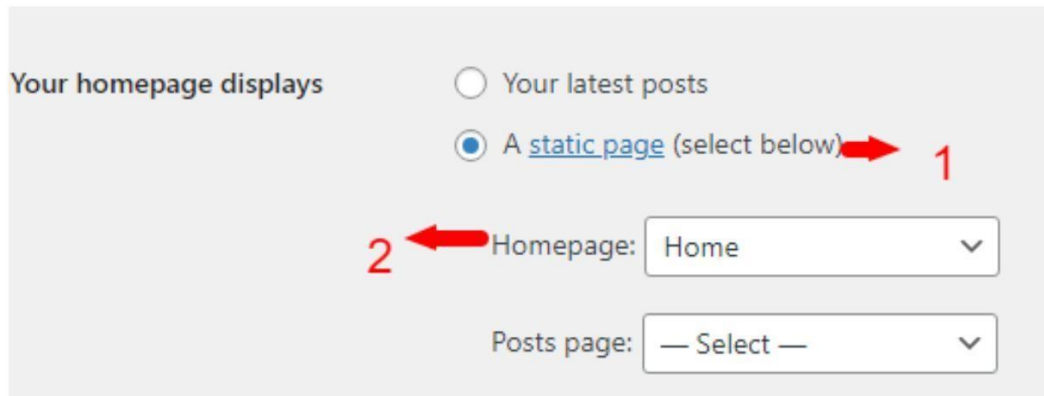

Step 5:

Set HomePage

A.Go To Setting → Reading → Your HomePage Display

→ Select ' Radio Button ' as static page

→ Select HomePage from the drop-down that you need to set for your website like in our case it is ' **Home** '

Step 6: (Optional)

How To Import Post and Project Data ?

If Layout Pack Have Project or Blog This Step Is Required else Not

One who have purchased the ' Product ' from ' Elegant Themes ' might have ' XML ' files in the **Supplementary Zip**.You can either use ' **Demo Data** ' provided as ' XML ' files or can use your own ' Demo Data ' .

There is usually 3 XML files ie Media,Post, and Project , but all 3 files is not needed in all the layout pack. You might have either of files mentioned or all the XML files depending upon the requirement in the supplementary folder

That is you have to import ' Media, Project, and Post ' as per the steps mentioned below .

Steps :

If you are importing ' Layout Pack ' on the fresh divi installation you might need import XML

For ' XML ' files you need to import it under Tools -> Import -> WordPress Import. You can ' skip this step ' if your site already have ' Posts ' added or loaded in WordPress Admin under " All Posts " .

How To Manage Posts Content & Categories ?

A. You can manage Posts content under **Posts -> All Posts** if in-case some of the posts images is not imported successfully due to server error and need to add images manually

B. Can manage posts category under **Posts -> Categories**

Frequently Asked Question

FAQ 1:

After Latest Divi Update There Is Issue With ‘ Social Media Icons ‘ or ‘ Content / Images ‘ not loading properly or There Is Text Overlapping Issue On Pages ?

Ans:

This issue is usually because of cache on the website due to recent Divi Update and can follow below steps to resolve it.

Step 1:

Go To Dashboard ->Divi -> Theme Options -> Builder -> Advanced Tab -> Static CSS File Generation

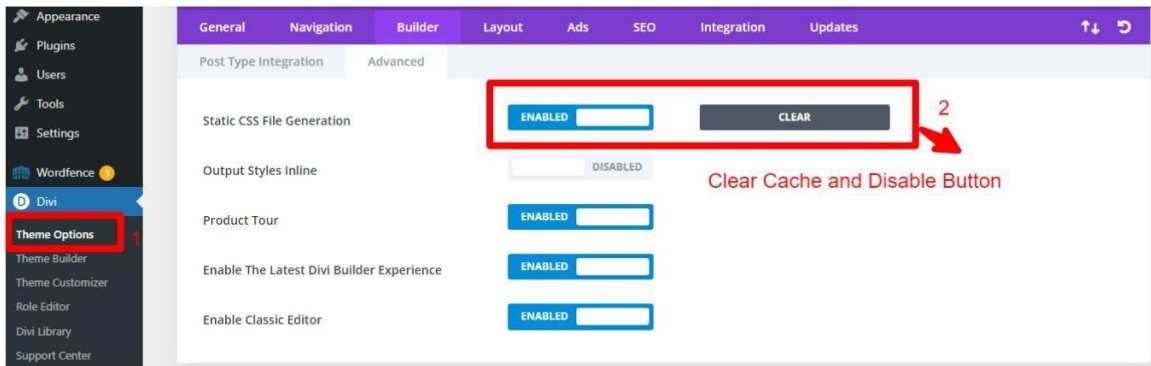

Step 2:

Click Clear Cache Button & Disable Tab -> Save Changes .

Step 3 :

For Further Resolution On Cache Follow Below Link
