

DIVI LAYOUT PACK INSTALLATION TUTORIAL:

<https://divilayouts.divithemecenter.com/divi-single-page-layout-pack-installation-guide/>

Requirements:

In order to successfully run ‘ **Our Divi Layouts** ’ on your website your server environment will have to meet certain PHP and WordPress minimal version requirements.

Essentials:

-PHP 5.4.X or higher

-In order to install our Child theme or Layouts, you must first Purchase **Elegant themes Membership** and Download **Divi theme**.

-This Divi Layouts is fully compatible with **Divi v4+**, just make sure that you’ve installed the latest version of Divi theme. Some features may not work correctly if the Divi theme version is less than **v4.3.2**.

Installation Documentation:

Files With The Product:

After you have Un-zip the file you will see :

1. → **Product Files** : This Folder Have A. ” **All_Styles_Library** ” JSON that will include all styles JSON in one file that you can import in ‘ **Divi Library** ’ B. “ **DiviThemeBuilder_Example** “ JSON that will be imported under **Divi - > Theme Builder** C. license.txt file
2. → ‘ **Supplementary Zip** ’ will include A. ‘ **Individual Styles Library Json**‘ Files B. Supporting document like [‘ **Installation Guide Files** ’]

Installation Guide :

Step 1:

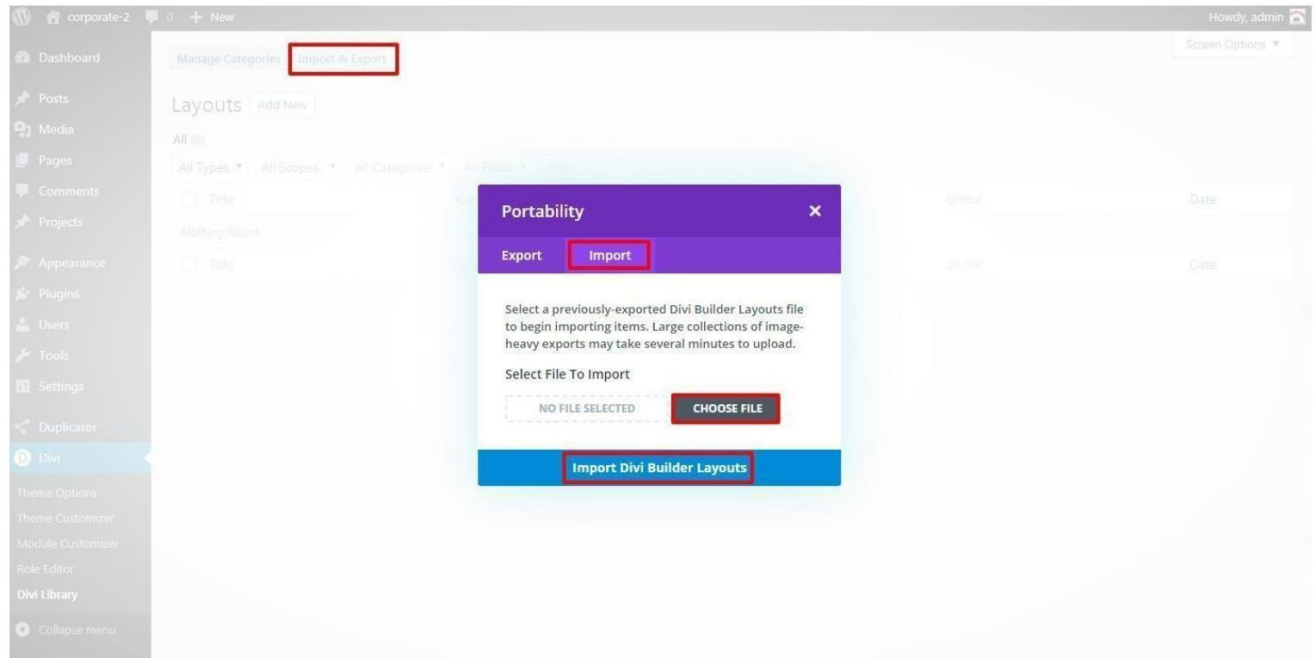

Import ‘ **All_Styles_Library_Json** ’ Files For Layout Pack Using Divi Library Method

A. Make sure you have the latest “ **Divi Theme installed** “ and activated

B. Import product ‘ **Library Layout (.json) File** ’ that is’ **All_Styles_Library_Json** ’under ‘ **Divi -> Divi**

Library -> Click Import & Export

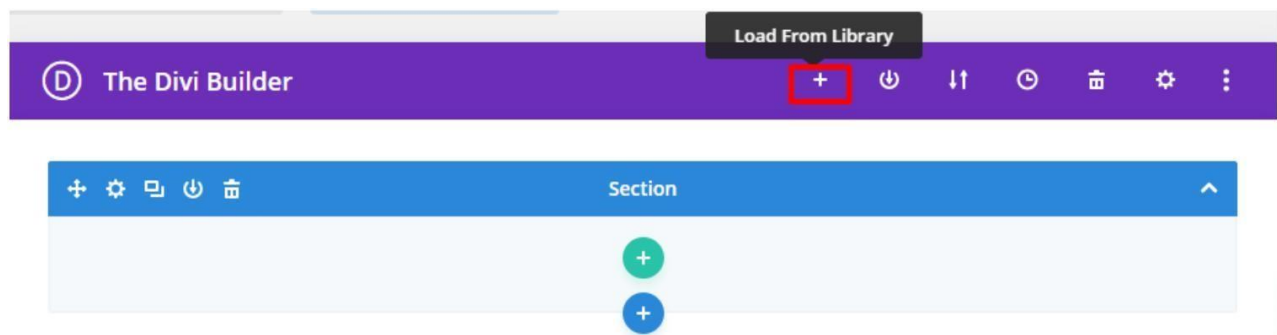

Use " All_Styles_Library_Json " if you want to import all styles in one shot under ' Divi Library '

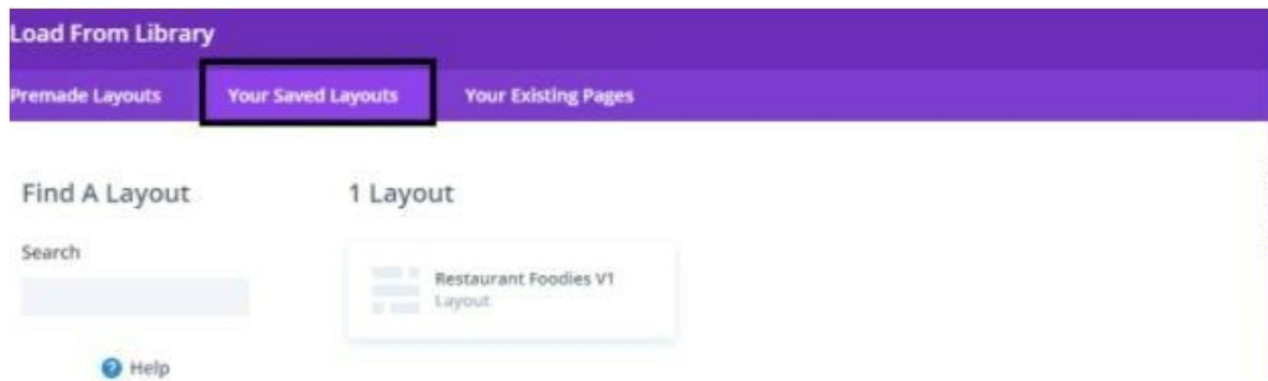

C. After importing JSON files ' Go To -> Divi Library ' and you will see layout you imported like below:

<input type="checkbox"/>	Title	Categories	Type	Global	Date
	Nothing found				

D. Go to Pages → Add New and give your page a title
→ Click on Use ' The Divi Builder '
→ Click on ' + ' Icon -> Go To " Your Saved Layouts "

Select one that you want to load on your page and import.

E. After selecting the layout ' **Publish Page** ' and see at the front end.

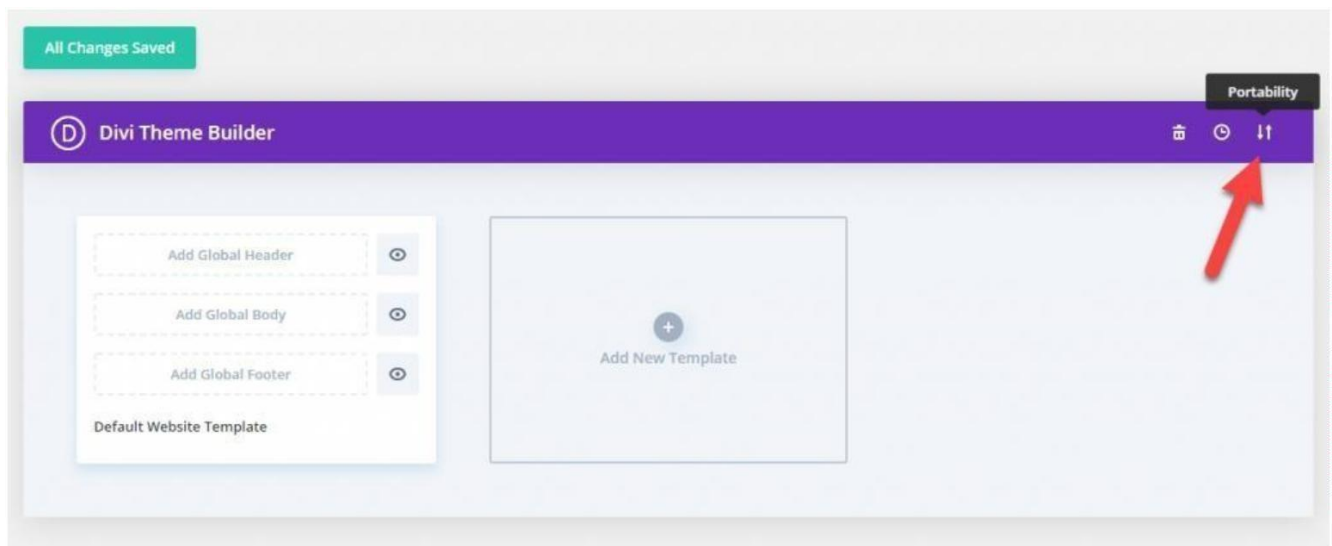

F. Wait until the layout is imported (it can take up to several minutes) Don't forget to publish/save your page.

G. All icons and images will be automatically imported with the .json file

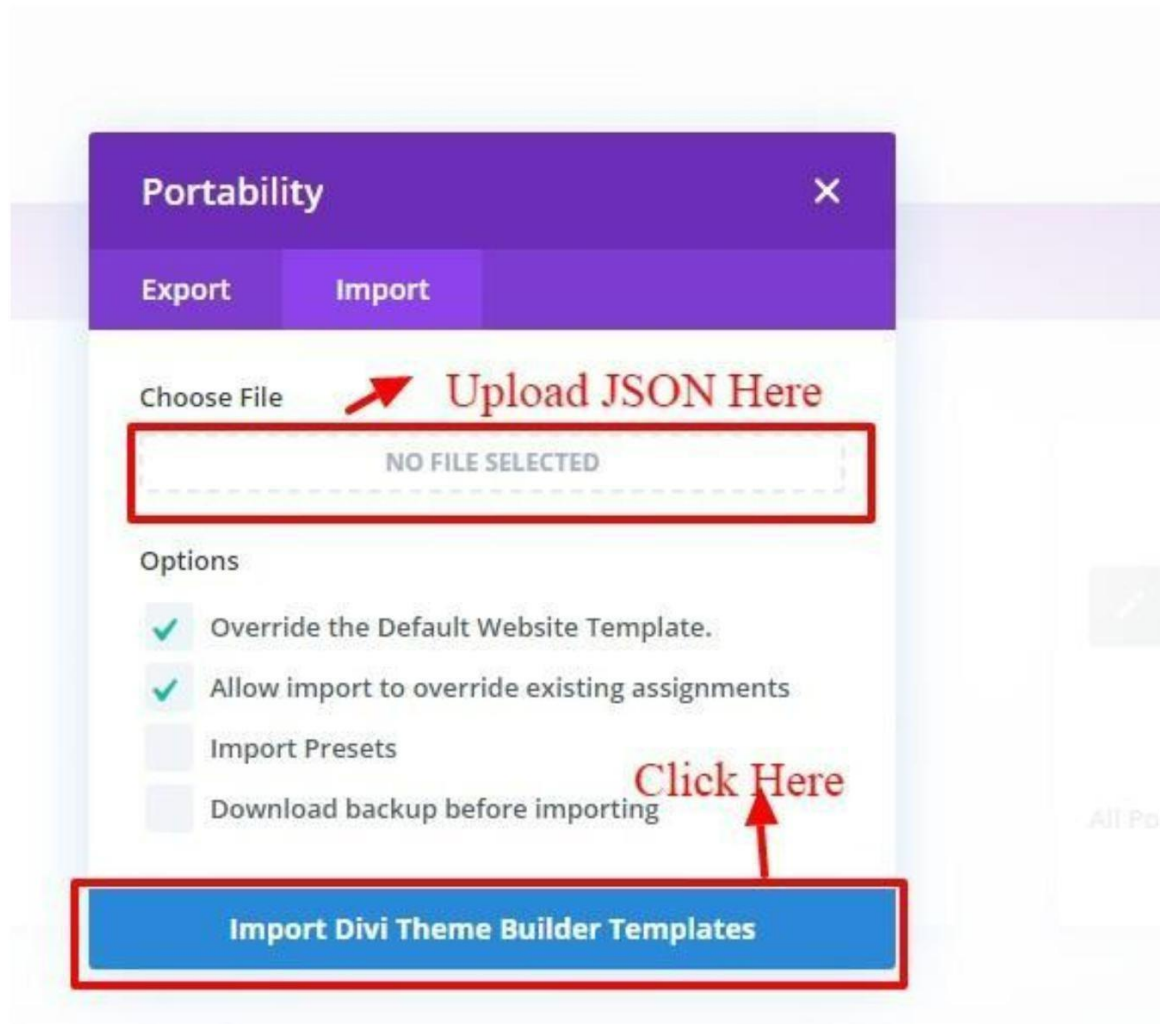

Step 2:

Import ' **ThemeBuilderLayout** ' JSON Available In The Product zip Files And Is Mandatory.

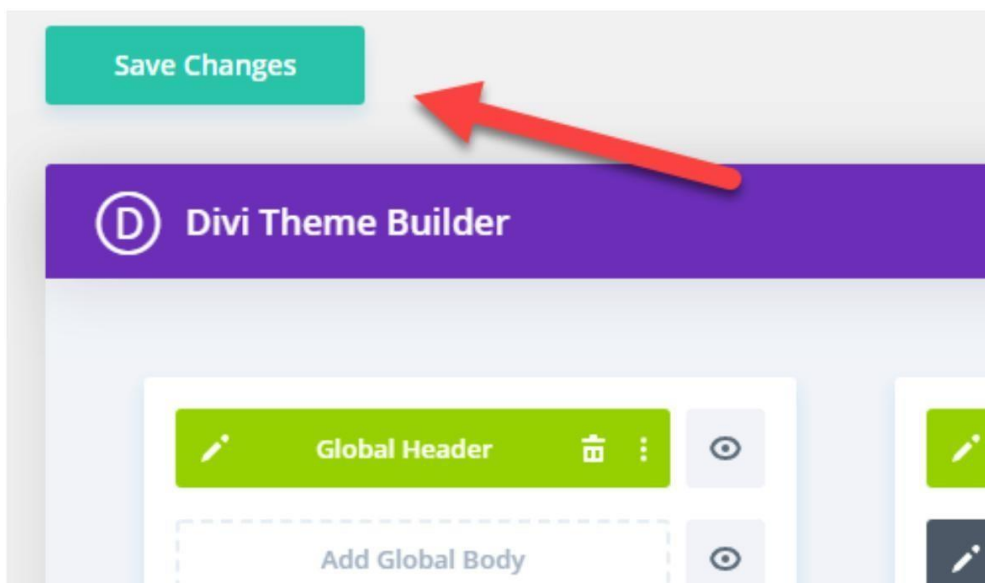

A. You need import ' **Theme Builder** ' json available in the supplementary zip and is mandatory. Now Hover over to **Divi > Theme Builder** and click on ' **Portability** ' Button at the top right corner.

B. Now click on the Import button and then Choose the ' **Theme Builder JSON** ' file from the Supplementary Package you've downloaded and Click on **Import Divi Theme Builder Templates** Button.

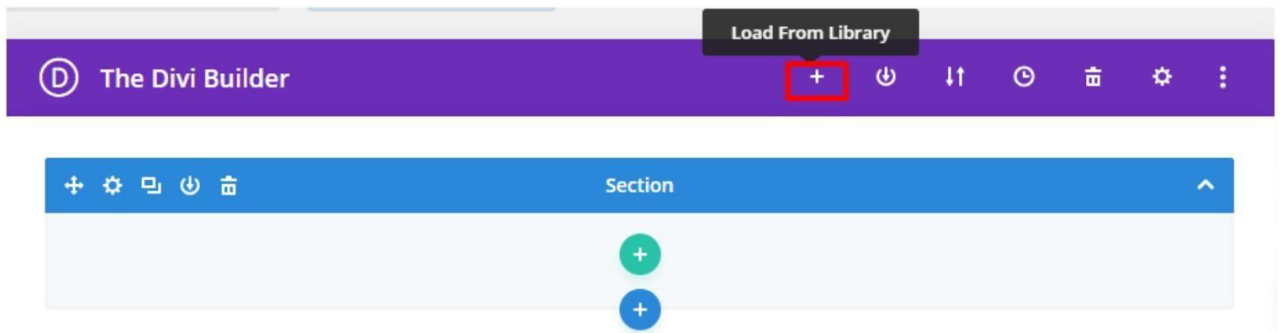

C. The Completion of the Importing Process, you can now click on the **Save Changes** button.

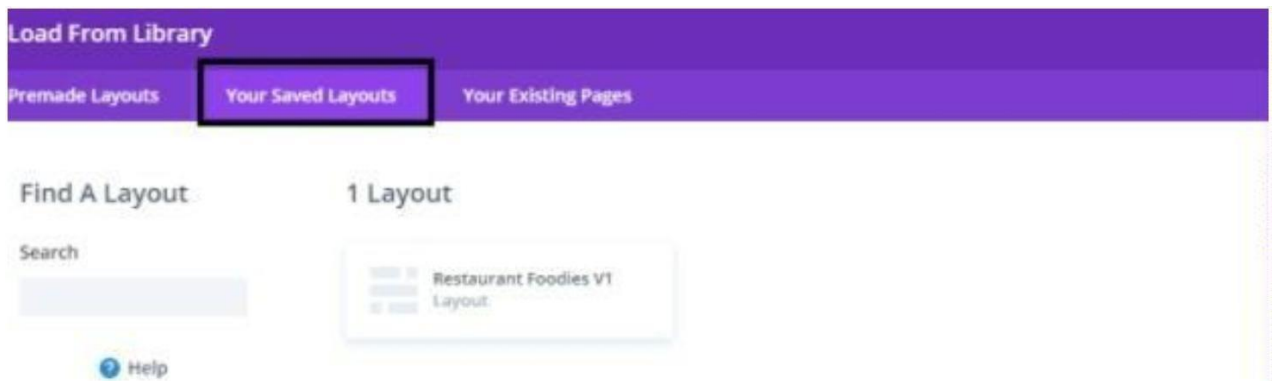

Step 3:

Creating Pages In Divi or Loading Required Pages From Divi Library That We Already Imported in The Previous Step

- A. Go to Pages → Add New and give your page a title
- Click on Use ' The Divi Builder '
- Click on ' + ' Icon -> Go To " Your Saved Layouts "

Select one that you want to load on your page and import.

For example if you want to load ' **Home V1** ' select that from the ' **Saved Layouts** ' under Divi Library

B. After selecting the layout ' **Publish Page** ' and see at the front end.

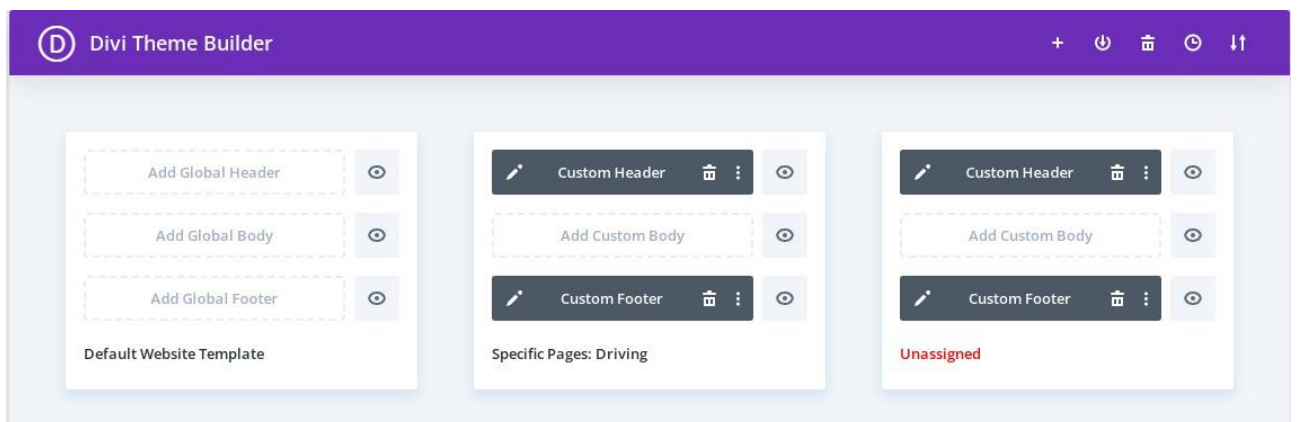

C. Wait until the layout is imported (it can take up to several minutes) Don't forget to publish/save your page.

C. Likewise you need to repeat same procedure and load all the ' Layouts ' that you need from ' **Saved Layouts** ' under Divi Library

Step 4:

Installation Step To Assign " Header + Footer " to Individual Page Layout " Using Divi Theme Builder Option

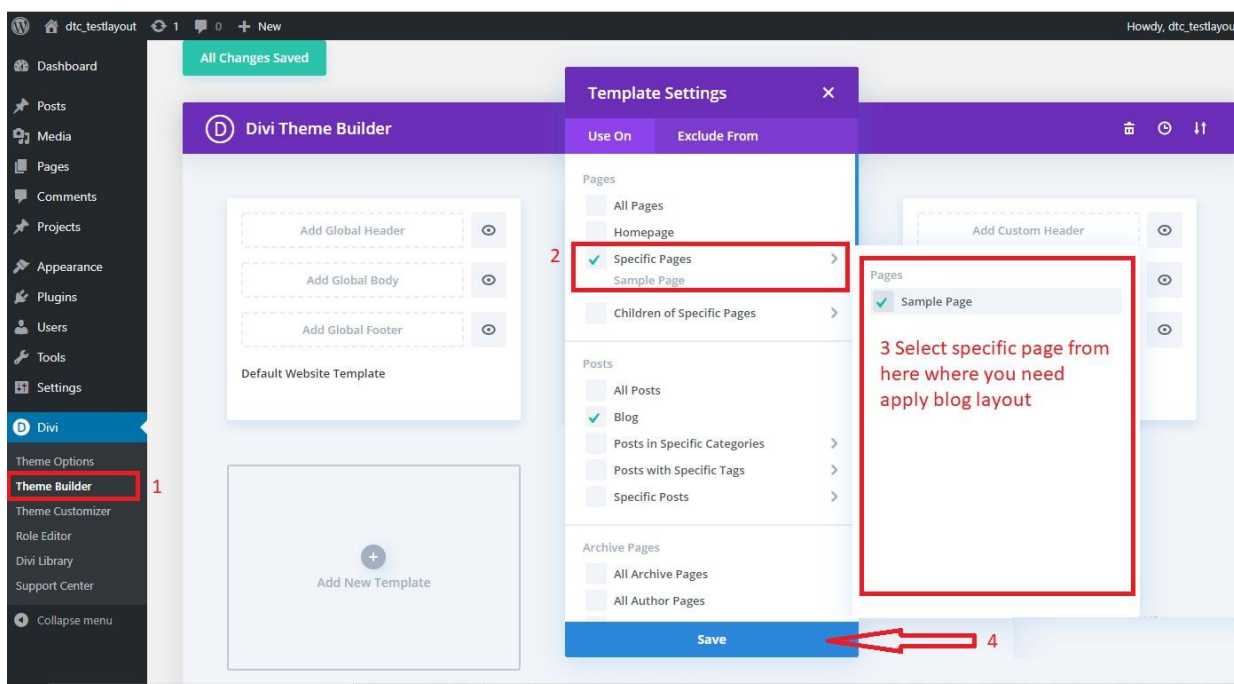

After you have imported the ' **Theme_Builder** ' json you will see ' Un - Assigned ' Template as you see in the screenshot below

For Example Above you can see one Template as ' **Unassigned** ' that you can assign to specific pages where you want to display the ' **Header & Footer** ' in Demo provided .

This step is mandatory where you need to " **Apply Theme Builder Header / Footer Layout To The Specific Page** " under ' **Theme Builder** '

You need to visit **Divi -> Theme Builder -> Click on 'Setting' option at top of 'Unassigned Template'**. That is if you want to use Template on your **'Home Page'** select that **'Specific Page Template'**.

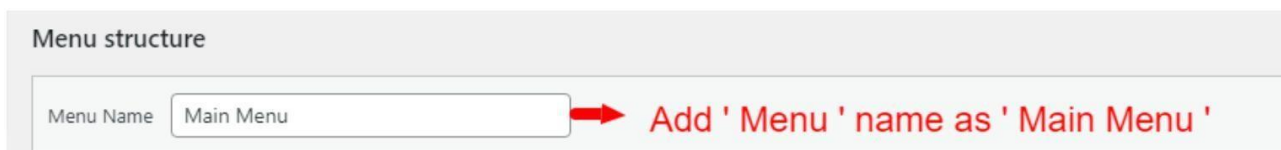

Select checkbox for **'specific pages'** and apply **"Template"** by **"clicking"** checkboxes for all the pages where you need to apply.

Once all **'Pages'** check-box is selected you can complete the process by clicking **"Save Changes"**.

Step 5:

Creating Menu and Set HomePage

A. Go to Appearance → Menu → Under Menu Structure **'Menu Name'**

B. Give name as **'Main Menu'** which is the name used for the menu in most of our layout packs or you need verify name for **'Menu'** under Divi → Theme Builder Setting → Global Header Setting

C. At Bottom of the **'Menu Structure'** page under Menu Setting → Set Menu as → Primary Menu → Save Menu

Menu Settings

Auto add pages

Automatically add new top-level pages to this menu

Display location

Primary Menu

1

Secondary Menu

Footer Menu

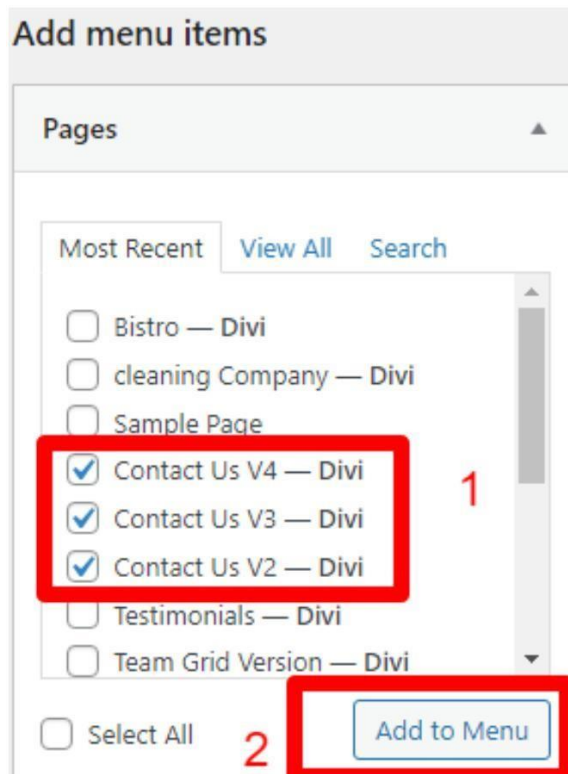

[Delete Menu](#)

2

Save Menu

D. Under ' **Add Menu Items** ' you will see list of all the pages that you have created in previous step ie Step 5

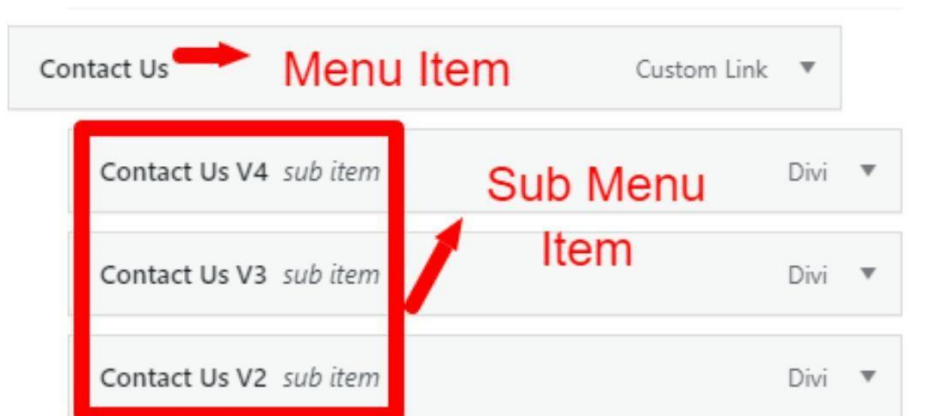

For Adding required pages in the ' **Menu** ' Go To Add Menu Items → Right Click All The Pages Needed - > Save By Clicking Add Menu Button

Like in above example have added ' **3 Contact Us Version** ' in the Menu

E. You can do the required setting as needed.

That is you can add pages that you need set as ' **Menu Item** ' and one as ' **Sub Menu Item** ' Like in example shown below have added ' Contact Us ' as menu item and ' Contact Us V2 to V4 ' as sub-menu item

Likewise can do required settings as needed.

F. Save the changes.

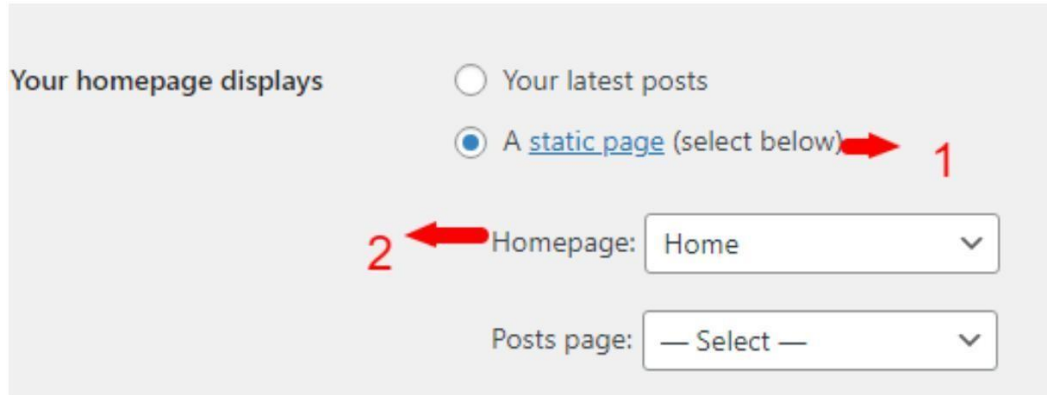

Step 6:

Set HomePage

A.Go To Setting → Reading → Your HomePage Display

→ Select ' Radio Button ' as static page

→ Select HomePage from the drop-down that you need to set for your website like in our case it is ' **Home** '

Frequently Asked Question

FAQ 1:

After Latest Divi Update There Is Issue With ' Social Media Icons ' or ' Content / Images ' not loading properly or There Is Text Overlapping Issue On Pages ?

Ans:

This issue is usually because of cache on the website due to recent Divi Update and can follow below steps to resolve it.

Step 1:

Go To Dashboard ->Divi -> Theme Options -> Builder -> Advanced Tab -> Static CSS File Generation

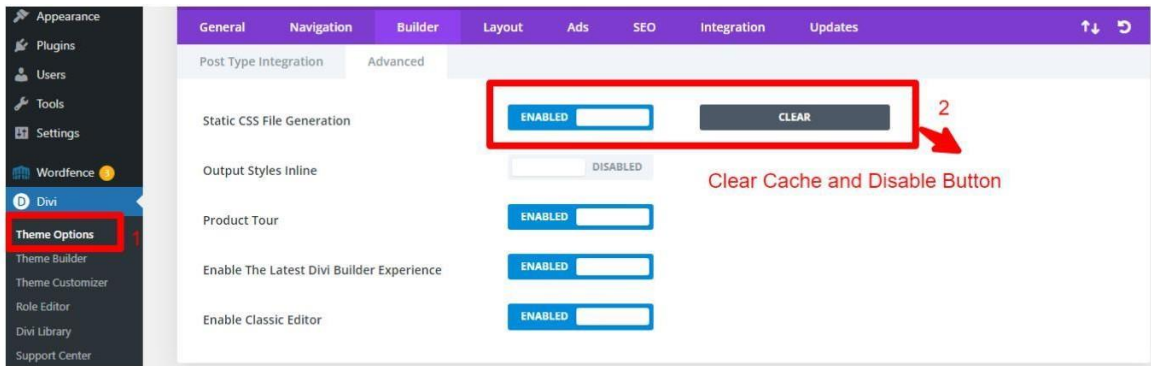

Step 2:

Click Clear Cache Button & Disable Tab -> Save Changes .
